The DELTA receiver is based on our TRIUMPH Technology implemented in our TRIUMPH Chip. For the first time in the GNSS history, we offer up to 100 Hz RTK, 216 channels of multi-frequency GPS, Galileo, and GLONASS in a small nice-looking durable watertight box with the TRE-G3TAJ or TRE-G3TAJT boards inside. The main advantage of Delta-G3TAJ(T) is the In Band Interference Rejection (IBIR) availability. Delta is a powerful and reliable receiver for high-precision navigation systems, including high dynamics systems, for machine and traffic control, as well as for high-precision surveying and geodynamics and aerogeophysics applications. Delta-G3TAJT supports IEEE 1588 Standard for a Precision Clock Synchronization Protocol for Networked Measurement and Control Systems. and operates as a GPS-synchronized master clock, which allows synchronization of real time industrial distributed systems over Ethernet network with sub-microsecond accuracy. Delta can operate as a receiver for post-processing, as a Continuously Operating Reference Station (CORS) or portable base station for Real-time Kinematic (RTK) applications, and as a scientific station collecting information for special studies, such as ionosphere monitoring and the like.
